Foreword	13
List of Contributors	17
1. Research and design of thin-walled steel structures by FEM. Part II-Two case studies applying advanced FEM based modelling	21
1.1. Introduction	21
1.2. Interactive buckling of pallet rack upright members	22
1.2.1. Koiter's asymptotic analysis	22
1.2.2. Numerical results	25
1.2.3. Evaluation of $\psi$ erosion factors	30
1.3. Bending-shear interaction of the web of short coupling steel beams with reduced section	32
1.3.1. Description of phenomenon	32
1.3.2. Experimental program	32
1.3.3. Numerical model. Model calibration and validation	35
1.3.4. Numerical model. Sensitivity study	38
1.3.5. Parametric study and interaction formula	40
1.3.6. Simplified numerical model	42
1.4. Concluding remarks	45
1.5. References	46
2. Postbuckling of delaminated thin-walled composite columns subjected to compression	49
2.1. Introduction	49
2.2. Object of the analysis	50
2.3. Numerical model of column with delamination	52
2.4. Analysis of the results	54
2.5. Conclusions	63
2.6. References	64
3. Studies of the post-critical and limit states of thin-walled composite columns under compression loads	67
3.1. Research procedure	70

3.1.1. Experimental tests	70
3.1.2. Numerical investigations	71
3.1.3. Failure criterion of composites	72
3.2. Post-buckling and limit states	73
3.2.1. Channel section columns	73
3.2.2. Top-hat section columns	80
3.3. Conclusions	85
3.4. References	86
4. Buckling strength of FML profiles of ‘classic’ versus thin-ply design	88
4.1. Introduction	88
4.2. Subject of research	89
4.3. Buckling problem	91
4.4. Buckling load comparison	93
4.5. Coupling effect	94
4.6. Thin-ply technique	100
4.7. Lamination parameters for bending stiffness assessment of FML designs	102
4.8. Comparison with buckling results obtained from Carbon/Epoxy composite materials	105
4.9. Conclusions	108
4.10. References	109
5. Static buckling of thin-walled plate elements made of general laminate	111
5.1. Problem formulation	112
5.2. Analytical-numerical method of analysis	118
5.3. Selected numerical results	120
5.4. Final remarks	131
5.5. References	132
6. Free vibrations and a critical load of a beam-column: Dynamic criterion of stability	136
6.1. Introduction	136
6.2. Analytical study of the free vibrations and critical load	137
6.3. Numerical-FEM study of the free vibrations and critical load	142
6.4. Laboratory tests of the free vibrations and critical load	142
6.5. Conclusions	144
6.6. References	144

7. Supercritical stationary regimes in Timoshenko beam on viscoelastic foundation under moving load	147
7.1. Introduction	147
7.2. Problem formulation	149
7.2.1. Experiment preparation	149
7.2.2. Equations of dynamics of elastic TB on viscoelastic foundation	149
7.2.3. Dimensionless equations	150
7.2.4. Equations for the case of moving force. Stationary running waves	151
7.3. Free waves in infinite long beam on elastic foundation. Some features of dispersion relations	153
7.4. Solution for SRWs in TB on viscoelastic foundation	157
7.4.1. Fourier integral transformation	157
7.4.2. Computation of integrals $I_j$ (7.28)	158
7.4.3. Solutions for the stationary running waves	159
7.5. Some results of numerical analysis of shapes of SRW at various force velocities	162
7.6. Conclusions	167
7.7. References	168
8. Mathematical modelling and investigations of the hexapod robot	169
8.1. Introduction	169
8.2. The prototype of the constructed hexapod robot	170
8.2.1. Biological inspiration	170
8.2.2. Mechanism of the robot leg	171
8.2.3. General presentation of the constructed robot	172
8.3. Mathematical modelling of the hexapod robot	173
8.3.1. Direct and inverse kinematics of the robot leg	173
8.3.2. Dynamical model of the robot with tripod gait	174
8.4. Control of the robot using Central Pattern Generators	176
8.4.1. Literature review	176
8.4.2. Stick-slip oscillator as a CPG	177
8.4.3. Control structure of the robot leg movements	178
8.5. Numerical simulations of the robot	180
8.5.1. Simulations of a single robot leg	180
8.5.2. Simulations of the whole robot	182
8.5.3. Kinematics of the whole robot	182
8.5.4. Contact forces of the robot	184
8.6. Experimental investigations	184

8.7. Conclusions	187
8.8. References	189
9. Post-ultimate behaviour of thin-walled cold-formed steel open-section members in pure and eccentric compression	191
9.1. Introduction	191
9.2. Fundamentals of yield-line analysis	194
9.3. Plastic mechanisms identified in TWCFS members under compression	196
9.3.1. Plastic mechanisms of plain channel sections	198
9.3.2. Plastic mechanisms in lipped channel sections	198
9.4. Plastic mechanisms identified in TWCFS members under eccentric compression	200
9.5. Methods for ultimate strength estimation of TWCFS members under compression and/or bending	202
9.6. Load carrying capacity and post-failure behaviour of TWCFS members under eccentric compression	203
9.7. Final remarks	207
9.8. References	207
